Gioele Pagot is Associate Professor of the Chemistry for Technologies at the Department of Industrial Engineering, University of Padova. He obtained his PhD in Science and Engineering of Materials and Nanostructures in 2019, focusing on electrode and electrolyte materials for advanced rechargeable batteries. In 2019, he was Visiting Postdoctoral Research Fellow at Hunter College, City University of New York.

His research focuses on functional materials for electrochemical energy storage and conversion, including lithium-, sodium-, magnesium- and calcium-based batteries, solid-state and ionic-liquid electrolytes, redox-flow batteries, fuel cells and water electrolysis. His expertise spans materials synthesis, advanced physicochemical and electrochemical characterization, ion-transport mechanisms and device testing.

He is PI or local PI of several nationally and internationally funded research projects. He has authored 90 scientific publications and has a Scopus h-index of 24. His research has received several awards, including the 2026 “Luisa Peraldo Bicelli” Award and the 2025 ECS Toyota Young Investigator Fellowship.
