Amedeo Buonanno holds a Ph.D. in Electronic and Computer Engineering from the Second University of Naples (now Università degli Studi della Campania "Luigi Vanvitelli") and a cum laude Laurea (M.S.) degree in Computer Engineering from the University of Naples Federico II. He is a researcher at ENEA's Smart Grid and Energy Networks Laboratory in Portici. Previously, he was an Industrial Researcher, Software Engineer, and Team Leader at Esaote S.p.A.'s Research and Development Laboratory, and a visiting researcher at the Senseable City Lab, Massachusetts Institute of Technology (summer 2008). His work focuses on AI (machine learning, deep learning, reinforcement learning), GenAI and Agentic AI for signal processing and energy system applications. He is a member of the IEEE Neural Networks Technical Committee and has authored over 50 international publications.
