Beatrice D'Orsi holds a dual doctoral degree in Accelerator Physics from Sapienza University of Rome (Italy) and Energy and Materials Science from the Institut National de la Recherche Scientifique (Montreal, Canada). She is currently a permanent Researcher at the Calliope Gamma irradiation facility, ENEA Casaccia Research Centre (Rome, Italy). Her research activity focuses on the optical and spectroscopic characterization of a wide range of materials to investigate and evaluate the effects of gamma irradiation, as well as on dosimetric studies.
