Dr. Ilaria De Stefano is a Research Scientist at the RED Biotechnology Laboratory of the ENEA Casaccia Research Centre (Rome, Italy), where she has been working since 2018. Her research activity focuses on molecular and cellular biology, pathology, radiation biology, and the investigation of diseases induced by physical and chemical agents. She is involved in the development and validation of innovative technologies and therapeutic approaches aimed at protecting human health, participating in several national and European research projects.

She previously worked at Guglielmo Marconi University, (Rome) as Assistant Professor and later Associate Professor of Applied Biology, teaching courses in Applied Biology and Biochemistry.

Dr. De Stefano earned a PhD in Molecular Pathology in Gynecologic Oncology from Università Cattolica del Sacro Cuore (Rome, Italy) and holds a Master' s Degree in Biological Sciences, awarded *summa cum laude*.

She is author or co-author of 37 peer-reviewed international publications, with a Google Scholar h-index of 19 and over 1,000 citations. Her scientific expertise includes radiation-induced diseases, cancer biology, molecular and cellular biology, animal models, histopathology, and biomolecular techniques.
