

Vincenzo De Mei received his M.Sc. degree in Physics from the Sapienza University of Rome, Italy, with a thesis on the fabrication and characterization of thermo-plasmonic controlled metasurfaces for biosensing and optical applications. He is currently a student at the Sapienza Medical Physics Specialization School, working both in diagnostics and in cancer treatment. He has two years of experience at ASL Latina, and in December 2025 started a new position at the Tor Vergata Polyclinic. His research interests include the application of nanotechnology in medical physics and its integration with clinical techniques. Under the supervision of Prof. Luciano De Sio and Dr. Francesca Petronella, he is working on the selective photothermal therapy of glioblastoma.
