Carmen Del Franco: PhD candidate in astrobiology at the University of Tuscia in Italy. Her research focuses on the resilience of Antarctic microbial communities under simulated Martian conditions within the Italian Space Agency-funded CRYPTOMARS project. She holds Bachelor's and Master's degrees in Biological Sciences and Molecular and Cellular Biology, respectively, from the University of Tuscia, and is a licensed professional biologist.

Her research interests include astrobiology, microbial ecology, extremophilic microorganisms and searching for life in environments that are relevant to planetary exploration. During her academic training, she completed research internships at the Istituto Superiore di Sanità (ISS) and ENEA.

She has presented her research at several national and international conferences, including CNSP, EANA, PAM 2026 and ICMMT 2025. She received the Best Oral Presentation Award at CNSP 2026, as well as the Scientific Outreach Video Award and an honourable mention in the Space Factor Contest at EANA 2024. She is a co-author of several peer-reviewed publications in astrobiology and Antarctic microbial ecology.
