Annalisa Di Tuoro is currently completing her Master’s degree in Nanotechnology Engineering at Sapienza University of Rome. She earned her Bachelor’s degree in Electronic Engineering from Roma Tre University in 2023 with a final grade of 102/110, presenting a thesis on the *"Preparation and Characterization of Starch-Based Films with UV-Barrier Properties.* In 2025, she participated in the YES Program Xi'an Summer School in China, focusing on materials science with an emphasis on composite and ceramic materials. During her Master’s studies, she explored how nanotechnologies can provide solutions for high-performance and sustainable materials, while gaining hands-on experience with innovative techniques and instrumentation for automotive, aerospace, and electronics applications.
