Bianca Dumontel is currently a post-doctoral researcher in the TNHLab at the Department of Applied Science and Technology, Politecnico di Torino. She received her PhD in Chemical Engineering from Politecnico di Torino in 2021, where she conducted her doctoral research within the ERC Starting Grant project TrojaNanoHorse (TNH). She subsequently spent two years as Postdoctoral researcher in the Smart Biomaterials Research Group at Universidad Complutense de Madrid.

Her research interests focus on the development of nanomaterials for biomedical applications, with an emphasis on biomimetic approaches for targeted drug delivery and stimuli-responsive cancer therapy. Her expertise includes the synthesis and physicochemical characterization of ZnO nano- and microstructures and mesoporous silica nanoparticles, as well as the development and *in vitro* validation of biomimetic coatings based on cell-derived extracellular vesicles, cell membranes, and artificial lipid shells functionalized with targeting ligands to enhance nanoparticle stability in biological environments, biomimicry, and targeting capabilities.

Torino, 25/07/2026
