Salvatore Fabozzi holds a Ph.D. in Energy Science and Engineering from the University of Naples Parthenope and a cum laude MSc in Environmental and Territorial Engineering from the University of Naples Federico II. He is a researcher at ENEA's Smart Grid and Energy Networks Laboratory in Portici. Previously, he was a research fellow at the University of Naples Parthenope and a visiting researcher at Aalborg University. His work focuses on energy system modelling, smart grids, multienergy systems, building demand, renewable integration, and AI-based forecasting. He contributes to national and European projects and develops methods and digital tools for energy planning, flexibility assessment, and integrated energy network management.
