Giulia Gigante is a Mechanical Engineer with a Master's degree in Mechanical Engineering (110/110 cum laude) from Roma Tre University. Since 2023, she has been a Research Fellow at the Materials Science and Technology Laboratory of the Department of Civil, Computer and Aeronautical Engineering at Roma Tre University, within the European Horizon Europe CoBRAIN project.

Her research activities focus on the nanomechanical characterization of wear- and corrosion-resistant thermal spray coatings, particularly high-entropy alloy-based coatings. She has extensive experience in nanoindentation, high-speed mapping, pillar-splitting, and the determination of hardness, elastic modulus and fracture toughness. She also works on FEM simulations using Abaqus and on the development of standardized characterization workflows for advanced materials.

Her research interests include thermal spray coatings, nanomechanical testing, high-entropy materials, fracture characterization and computational/experimental materials engineering. She has presented her research at national and international conferences and scientific meetings.
