

Antonio Alessio Leonardi is an Associate Professor of Experimental Condensed Matter Physics at the University of Messina (Italy). His research focuses on nanotechnology and nanomaterials, with particular emphasis on silicon nanowires, 2D materials, and their applications in photonics and sensing. He has contributed to the development of highly sensitive and selective nanostructured platforms for biomedical diagnostics and environmental monitoring. His work also includes the fabrication of cost-effective, industrially scalable nanomaterials and the study of light–matter interaction in complex nanostructures. He has authored over 50 scientific publications and is actively involved in national and international research projects and collaborations.
