Lorenza Ferrario is senior researcher at the Fondazione Bruno Kessler. For more than twenty years, she held coordinating roles within FBK's microelectronics cleanrooms. In parallel to the development of a strong background in silicon technology, she always cared about advanced information systems and LIMS for managing R&D knowledge in nanofabrication contexts. She developed the first LIMS for the FBK cleanrooms.

As a natural progression of these interests, Lorenza Ferrario has added the FAIR approach to scientific data management to her research topics, becoming an active contributor in recent PNRR and EU projects, supporting the development of FAIR oriented data infrastructure.

Lorenza Ferrario is co-author of more than 70 scientific publications.
