Chiara Elvira Mainardi received the M.Sc. degree in Ecobiology from Sapienza University of Rome, Italy, in 2021, and a Ph.D. in Environmental and Evolutionary Biology from the same university in 2025. She is currently a Research Fellow at the Calliope Facility, ENEA Casaccia Research Centre, where she conducts research on the applications of gamma irradiation in the agri-food, environmental, and cultural heritage sectors.

Her research focuses on the development of sustainable strategies for the management of invasive insect pests, with particular emphasis on the Sterile Insect Technique (SIT), biological control, and the application of ionizing radiation in agriculture. She has collaborated with the Biotechnology and Biological Control Agency (BBCA, Italy), the European Biological Control Laboratory (EBCL, France), and the Edmund Mach Foundation (FEM, Italy). She is the author of several peer-reviewed publications on the application of the Sterile Insect Technique for the management of invasive insect pests, particularly *Bagrada hilaris*.
