Dr. Emiliana Mansi is an industrial chemist and researcher at ENEA's CALLIOPE gamma-irradiation facility, where her work focuses on studying the effects of ionizing radiation on materials. She earned her Ph.D. in Chemical Processes for Industry and the Environment from "La Sapienza" University of Rome in collaboration with ENEA, conducting research on advanced heat transfer fluids for high-power energy systems. Throughout her career, she has developed multidisciplinary expertise in the fields of nuclear technology, the circular economy and the restoration and conservation of cultural heritage.
