Andrea Mazzillo earned a Master's Degree in Nanotechnology Engineering in 2026 from Sapienza University of Rome, graduating with a final mark of 110/110 cum laude. His academic background is rooted in a Bachelor's Degree in Mechanical Engineering, obtained in 2022 and driven by a deep passion for science, engineering, and Formula 1. During his master's studies, he further explored materials science through an experimental thesis project focused on the design, manufacturing, and characterization of a fiber-reinforced metal-matrix nanocomposite. Since July 2026, he has been a research fellow for INSTM on the TECNOPROTEO project, which focuses on the study, evaluation, and characterization of recycled material powders for the development of composites intended for industrial and automotive applications.
