Elisa Mercadelli is a Researcher at the Institute of Science, Technology and Sustainability for Ceramics (ISSMC) of the National Research Council of Italy. Her main research activities concern the synthesis and characterization of advanced ceramic powders and their shaping processes.
Her recent activities are mainly focused on the shaping of multilayer ceramic structures for sodium-based batteries, solid oxide fuel cells (SOFC) and electrolyzers (SOECs), membranes for high temperature hydrogen separation, as well as for piezoelectric applications. She is co-author of more than 80 papers published on international journals. She is supervisor of MSc students of Bologna University in research projects on synthesis of nanopowders and shaping of ceramic materials for catalytic, piezoelectric and energetic applications.
