Dr. Jorge Montero holds a bachelor's degree in chemical sciences and a master's degree in chemical science and technology from the Complutense University of Madrid, Spain. He obtained his PhD through a joint programme between the International University Menéndez Pelayo (ICTP-CSIC) and the University of Rome Tor Vergata. His doctoral thesis was entitled "Metal-Organic Materials for Energy Storage and Conversion". Since 2021, he has been working as a Postdoctoral Researcher at University of Rome Tor Vergata and since 2023 at Sapienza University of Rome, within the ENAM research group, focusing on research activities related to energy storage and conversion technologies.

Jorge Montero's research interests include the electrochemistry of energy conversion and storage devices, with a particular focus on the synthesis and development of materials for lithium-ion and post-lithium-ion batteries, redox flow batteries (RFBs), as well as electrocatalysts for electrolyzers and fuel cell systems.

He is the author or co-author of more than 10 research articles and scientific publications in peer-reviewed journals indexed in the Web of Science, as well as one book chapter. Dr. Montero has participated in more than 15 international conferences, including one invited oral presentation, and served as a member of the organizing committee of the 1st SESDIM (Sustainable Energy Storage Days in Madrid) Congress. He has also contributed to several research projects, including PNRR and Lazio FESR projects, as well as international collaborative experiments, such as "X-ray Spectroscopy of Solid/Liquid Interfaces for Revealing the Mechanisms of Crystalline Organic Electrode Materials for Li-Ion Batteries", conducted at the ALBA Synchrotron.
