Erasmo Salvatore Napolitano holds a Master’s degree in Chemical Engineering and Materials and a PhD in Civil and Industrial Engineering, with a research background in computational modelling, membrane technologies and advanced materials. He has been working at RINA Consulting – Centro Sviluppo Materiali since July 2025 as a researcher in applied chemistry and advanced materials development. Within FASTCH2ANGE, he plays a key role in the molecular-level design and understanding of PFAS-free proton-exchange membranes, applying computational chemistry and ab initio modelling to investigate structure–property relationships, support material selection and guide experimental development.
