Riccardo Pallotta is a Postdoctoral Researcher at the Friedrich-Alexander-Universität Erlangen-Nürnberg (FAU), Department of Material Science and Engineering, in the i-MEET research group led by Prof. Christoph Brabec. His postdoctoral position is funded by the Deutsche Forschungsgemeinschaft (DFG) within the Collaborative Research Center CRC 1719 "ChemPrint." He obtained his Ph.D. in Chemical and Pharmaceutical Sciences and Related Industrial Innovation from the University of Pavia in 2025, working under the supervision of Prof. G. Grancini on a thesis titled "Modulating Perovskite Crystallization Through Solvent Manipulation." His research focuses on the crystallization dynamics, stability, and interface engineering of halide perovskite solar cells. He is co-author of more than ten peer-reviewed publications in journals including Joule, Advanced Energy Materials, ACS Energy Letters, and Communications Materials, and co-inventor of five patent disclosures on perovskite-based photovoltaic cells. He has also supervised master's students and research fellows, and has presented his work at international conferences including PSCO and the Next Generation PV Materials Conference.
