

Simone Scardapane is Associate Professor at the Department of Information Engineering, Electronics and Telecommunications of Sapienza University of Rome. His research focuses on efficient and explainable neural models, topological and geometric deep learning, and continual learning, with applications to scientific discovery, telecommunications, medicine, and environmental monitoring. He teaches in the degree programs of Data Science, Artificial Intelligence and Robotics, Computer Engineering, and Telecommunications Engineering.

He is affiliated with INFN, is a Junior Fellow of the Sapienza School for Advanced Studies, and is a member of CNIT and ELLIS. He is principal investigator of Sapienza-funded projects and participates in national and European projects on artificial intelligence, communications, and machine learning.

He also serves as the reference person for teaching software within the Innovative Teaching Committee of the Sapienza Teaching & Learning Center. In this role, he has contributed to the AI literacy program for university faculty, coordinating the initiative and delivering a webinar dedicated to agentic systems and their use in teaching.
