Ilaria Tonazzini is a Senior Researcher at the Nanoscience Institute of the Italian National Research Council (CNR-NANO) in Pisa, Italy. She is a biochemist by formation, with a PhD in Drug's Science (@University of Pisa). Her research focuses on the development of biocompatible nano- and micro-structured materials for studying and treating disorders of the central and peripheral nervous system. Her work spans neural tissue engineering, nerve regeneration, biomaterials, and brain-targeted nanocarriers for drug delivery. Throughout her career, she has held research positions at CNR, Scuola Normale Superiore, Erasmus Medical Center (Rotterdam, NL), and Karolinska Institute (Stockholm, SE). She has led and contributed to national and international research projects, including Marie Skłodowska-Curie, Fondazione Veronesi and EMBO-funded initiatives.
