Pietro Zaccagnini is a Research Fellow at the Department of Applied Science and Technology of Politecnico di Torino and an Associate Researcher at the Italian Institute of Technology. With a multidisciplinary background in electronic engineering, nanotechnology and materials science, he received his PhD cum laude with a thesis on graphene-based supercapacitors for harsh-environment applications. His research combines nanomaterial design, electrochemical characterization and device engineering to develop sustainable energy-storage and energy-harvesting technologies. His main interests include laser-induced graphene, flexible and microscale supercapacitors, green electrode formulations, advanced electrolytes, electrochemical impedance spectroscopy and integrated power sources for low-power electronics and the Internet of Things. He is the author of more than 30 scientific publications and a co-inventor of a patent on electrochemical energy-storage devices.
